

### SEMESTER-I COURSE 2: ADVANCES IN MATHEMATICAL, PHYSICALAND CHEMICAL SCIENCES

Theory Credits: 4 5 hrs/week

#### **Course Objective:**

The objective of this course is to provide students with an in-depth understanding of the recent advances and cutting-edge research in mathematical, physical, and chemical sciences. The course aims to broaden students' knowledge beyond the foundational concepts and expose them to the latest developments in these disciplines, fostering critical thinking, research skills, and the ability to contribute to scientific advancements.

#### **Learning outcomes:**

- 1. Explore the applications of mathematics in various fields of physics and chemistry, to understand how mathematical concepts are used to model and solve real-world problems.
- 2. To Explain the basic principles and concepts underlying a broad range of fundamental areas of physics and to Connect their knowledge of physics to everyday situations.
- 3. Understand the different sources of renewable energy and their generation processes and advances in nanomaterials and their properties, with a focus on quantum dots. To study the emerging field of quantum communication and its potential applications. To gain an understanding of the principles of biophysics in studying biological systems. Explore the properties and applications of shape memory materials.
- 3. Understand the principles and techniques used in computer-aided drug design and drug delivery systems, to understand the fabrication techniques and working principles of nanosensors. Explore the effects of chemical pollutants on ecosystems and human health.
- 4. Understand the interplay and connections between mathematics, physics, and chemistry in various advanced applications. Recognize how mathematical models and physical and chemical principles can be used to explain and predict phenomena in different contexts.
- 5 Understand and convert between different number systems, such as binary, octal, decimal, and hexadecimal. Differentiate between analog and digital signals and understand their characteristics. Gain knowledge of different types of transmission media, such as wired (e.g., copper cables, fiber optics) and wireless (e.g., radio waves, microwave, satellite).

#### **UNIT I: ADVANCES IN BASICS MATHEMATICS**

**Straight Lines:** Different forms – Reduction of general equation into various forms – Point of intersection of two straight lines

**Limits and Differentiation:** Standard limits – Derivative of a function – Problems on product rule and quotient rule

**Integration:** Integration as a reverse process of differentiation – Basic methods of integration

**Matrices:** Types of matrices – Scalar multiple of a matrix – Multiplication of matrices – Transpose of a matrix and determinants

#### **UNIT II: ADVANCES IN PHYSICS:**

**Renewable energy**: Generation, energy storage, and energy-efficient materials and devices. **Recent advances in the field of nanotechnology**: Quantum dots, Quantum Communication-recent advances in biophysics- recent advances in medical physics- Shape Memory Materials.

#### UNIT III: ADVANCES IN CHEMISTRY:

Computer aided drug design and delivery, nano sensors, Chemical Biology, impact of chemical pollutants on ecosystems and human health, Dye removal - Catalysis method

## UNIT IV: ADVANCED APPLICATIONS OF MATHEMATICS, PHYSICS & CHEMISTRY

Mathematical Modelling applications in physics and chemistry

**Application of Renewable energy**: Grid Integration and Smart Grids,

Application of nanotechnology: Nanomedicine,

Application of biophysics: Biophysical Imaging, Biomechanics, Neurophysics,

**Application of medical physics**: Radiation Therapy, Nuclear medicine

Solid waste management, Environmental remediation- Green Technology, Water treatment.

#### **UNIT V: Advanced Applications of computer Science**

Number System-Binary, Octal, decimal, and Hexadecimal, Signals-Analog, Digital, Modem, Codec, Multiplexing, Transmission media, error detection and correction- Parity check and CRC, Networking devices- Repeater, hub, bridge, switch, router, gateway.

#### **Recommended books:**

- 1. Coordinate Geometry by S.L.Lony, Arihant Publications
- 2. Calculus by Thomas and Finny, Pearson Publications
- 3. Matrices by A.R. Vasishtha and A.K. Vasishtha, Krishna Prakashan Media(P)Ltd.
- 4. "Renewable Energy: Power for a Sustainable Future" by Godfrey Boyle
- 5. "Energy Storage: A Nontechnical Guide" by Richard Baxter
- 6. "Nanotechnology: Principles and Applications" by Sulabha K. Kulkarni and Raghvendra A. Bohara
- 7. "Biophysics: An Introduction" by Rodney Cotterill
- 8. "Medical Physics: Imaging" by James G. Webster
- 9. "Shape Memory Alloys: Properties and Applications" by Dimitris C. Lagoudas
- 10. Nano materials and applications by M.N.Borah
- 11. Environmental Chemistry by Anil.K.D.E.
- 12 Digital Logic Design by Morris Mano

### Single Major (w.e.f. AY 2023-24) SEMESTER-I Model Paper

### COURSE -2 ADVANCES OF MATHEMATICAL, PHYSICAL & CHEMICAL SCIENCES Time: 3 Hrs MAX MARKS: 70 M

|     | Time: 3Hrs  |  |   | MAX MARKS: 70 M         |
|-----|---|--|---|-------------------------|
| I   | Multiple Choice Questions   | TION A   |   | 3x10=30M                |
| 1.  | The equation of the line passing through the  | <u>'TION – A</u><br>point (1, 2) and perpe                 | ndicular to                             | the line $x+y+1=0$ is   |
|     |   |  | Г                                       | 1                       |
|     | a) $y-x+1=0$ b) $y-x-1=0$   | c) $y-x+2=0$   | d) y-x-2=                               | =0                      |
|     | $x = \frac{x}{2}$ is equal to   |  | Γ                                       | ]                       |
| 2.  | a) $y-x+1=0$ b) $y-x-1=0$ $x \to 0 \xrightarrow{x^2} \text{ is equal to}$ a) $0 = x^2$ b) $1 = x^2$ c) $2 = x^2$  | d) 4   | L                                       | J                       |
| 3.  | The derivative of $\cos^{-1}(2x^2 - 1)$ w.r.to $\cos^{-1}(2x^2 - 1)$  | (x) is   | [                                       |                         |
|     | The derivative of $\cos^{-1}(2x^2 - 1)$ w.r.to | d) 1- x <sup>2</sup>                                       |   |                         |
| 4.  | $\int e^{\tan x} \sec^2 x  dx =$  |  | [                                       | ]                       |
|     | a) $e^{\tan x}$ b) $e^{\sin x}$ c) $\tan x$ d) $\sin x$   |  |   |                         |
| 5.  | If $2x + y = \begin{bmatrix} 1 & 0 \\ -3 & 2 \end{bmatrix}$ and $2x - y = \begin{bmatrix} 3 & 4 \\ -1 & 2 \end{bmatrix}$ $\begin{bmatrix} 4 & 4 \\ -4 & 4 \end{bmatrix}$ $\begin{bmatrix} 1 & 1 \\ -4 & 4 \end{bmatrix}$ $\begin{bmatrix} 1 & 1 \\ -1 & 1 \end{bmatrix}$  | then X is equal to   | [                                       | 1                       |
|     | $\begin{bmatrix} 4 & 4 \\ -4 & 4 \end{bmatrix} \qquad \begin{bmatrix} 1 & 1 \\ b & -1 & 1 \end{bmatrix}$  | c) $\begin{bmatrix} -1 & -2 \\ -1 & 0 \end{bmatrix}$       | d) None                                 | of these                |
| 6.  | If $A = [aij]_{mxn}$ such that $aij = 0$ for $i \neq j$ then  | ı A is   | [                                       | ]                       |
|     |   | olumn matrix   |   | _                       |
|     | c) a diagonal matrix d) a scalar ma   |  |   |                         |
| 7.  | Which of the following is an renewable energy   |  | [                                       | ]                       |
|     | a) Coal b) Natural gas  | c) Solar   | d) Nucle                                | ar                      |
| 8.  | What is the main purpose of Photovoltaic ce   |  | [                                       | ]                       |
|     | a) Heat generation b) Electricity generation  |  | fication d)                             | Carbon captune          |
| 9.  | Which renewable energy source is harnessed  | d from the earth's   | -                                       | -                       |
|     | Internal heat?  | a) C (1 1  | 1) 11 1                                 | ]                       |
| 10. | <ul><li>a) Solar</li><li>b) Wind</li><li>What is the fundamental principle behind qu</li></ul>  | c) Geothermal  | d) Hydro                                | )                       |
| 10. | a) Classical Mechanics b) Quantum Superpo   |  | l<br>v of motio                         | n d) Maywell's equation |
| 11. | What is the primary application of proton th  | *  |   |                         |
| 11. | a) Diagnostic Imaging b) Radiation therapy  |  |   | J<br>r                  |
|     | d) Computed Tomography (C.T)  | o) magnetic resemble                                       | · • · · · · · · · · · · · · · · · · · · | •                       |
| 12. | What is the primary advantage of using qua  | ntum dob in solar cells                                    | s? [                                    | ]                       |

| III   | Fill in the Blanks  |          | 10x1=10M   |  |  |  |
|-------|---|----------|--|--|--|--|
| 1.    | Tidal energy is an Example forenergy.   |          |  |  |  |  |
| 2.    | are the particles used in quantum dots.   |          |  |  |  |  |
| 3.    | Expand CADD   |          |  |  |  |  |
| 4.    | First step in the purification of water   |          |  |  |  |  |
| 5.    | is an application   | on for l | Medical Physics.   |  |  |  |
| 6.    | is an application for Medical Physics.  MRI stands for  |          |  |  |  |  |
| 7.    | $\int e^x \sin x \cos x dx = \underline{\hspace{1cm}}$  |          | ·  |  |  |  |
| 8.    | Equation of the lines through the point $(3, 2)$ and making an angle of $45^{\circ}$ with the line $x-2y=3$ are |          |  |  |  |  |
| 9.    | A computer understands only   |          | code   |  |  |  |
| 10.co | nverts audio and video into digital in  | format   | ion  |  |  |  |
|       |   | SE       | ECTION – C   |  |  |  |
| Ш     | Answer the following Questions 10x1=10M   |          |  |  |  |  |
| 1.    | Give some Examples for renewable sources?   |          |  |  |  |  |
| 2.    | Information stored in quantum com   | _        |  |  |  |  |
| 3.    | What is the difference between MR   |          |  |  |  |  |
| 4.    | Name two applications of Nanoteck   | hnolog   | ÿ?   |  |  |  |
| 5.    | Solid waste Management? (SWM)   |          |  |  |  |  |
| 6.    | Expand ADMET  |          |  |  |  |  |
| 7.    | $x \xrightarrow{Lt} 0 \frac{ax + x \cos x}{b \sin x}$ ; Evaluate  |          |  |  |  |  |
| 8.    | Evaluate $\int x(\log x)^2 dx$  |          |  |  |  |  |
| 9.    | What are the key design issues of t   | he con   | nputer networks?   |  |  |  |
| 10.   | What is multiplexing?   |          |  |  |  |  |
|       |   | SF       | ECTION – D   |  |  |  |
| III   | Match the following   |          | 10x1=10M   |  |  |  |
| 1.    | A. Wind energy  | (        | ) a) Orthodontic applications                                  |  |  |  |
|       | B. Solar energy   | (        | ) b) Non invasile imaging                                      |  |  |  |
|       | C. Minamata   | (        | ) c) Harness the kinetic energy of wind to produce electricity |  |  |  |
|       | D. Ni-Ti wire   | (        | ) d) Convert sunlight into electricity                         |  |  |  |
|       | E. Magnetic Resonance Imaging   | (        | e) Mercury   |  |  |  |
| 2.    | A. Fluoroscene microscopy   | (        | ) a) 3   |  |  |  |
| _     | Γ <sub>0</sub> 4]   |          |  |  |  |  |
|       | B. $\begin{bmatrix} 3 & -4 \\ m & 5 \end{bmatrix} = 3$ then m value is  | (        | ) b) Moniterity cellular                                       |  |  |  |
|       | $C. \frac{d}{dx} \left[ \log \left( \sec x + \tan x \right) \right]$  | (        | ) c) F1  |  |  |  |
|       | D. 11110001   | (        | ) d) Guided media  |  |  |  |
|       | E. Ethernet cable   | (        | ) e) (secx)  |  |  |  |
|       |   |          |  |  |  |  |

#### **SECTION – E**

#### IV True (or) False

10x1=10M

- 1. Quantum dots are the nano particles, are primarily used for structural Reintor cement in medical implants?
- 2. Quantum mechanics is a branch of physics Extensively used mathematical Models, to describe the behavior of particles at atomic and subatomic level.
- 3. The Mass of a body is equivalent to the ratio of the force action on it to the acceleration it generates.
- 4. The region of the atmosphere above troposphere is known as Lithosphere.
- 5. Essential Amino acids can be synthesized by the human body
- 6. Electrons fill the lowest energy levels first
- 7. The equation of a line with slope m and making an intercept c on y axis is y=mx
- 8. Intercept form of a line which cuts a and b respectively on the x and y axis

Then 
$$\frac{x}{a} + \frac{y}{b} = 1$$

- 9. A university would use a CAN to converts its composes in two cities.
- 10. Gateway device is operate at transport layer.
